## Appendix A—Development of GradeLevel Performance Level Descriptors

## Development of Grade-Level Performance Level Descriptors

## PHASE 1: DEVELOPMENT OF INITIAL DRAFT PLDS

NCSC developed the PLDs for mathematics and ELA at grades 3-8 and 11 through an iterative process involving multiple stakeholder groups (see Exhibit 1). The grade-level PL Ds were developed to summarize the K SA s prioritized for the NCSC assessments that students need to attain at each level of achievement (Level 1-Level 4). A committee of NCSC partners holding content, measurement, and/or significant disabilities expertise drafted the initial PLDs as described by Sireci, Hambleton, and Bahry (2013), Their report documents the development process for the initial grade-level PLD drafts as well as the literature base used for PLD development.

A fter initial development of the PLDs, state and organizational partners reviewed the draft gradelevel PLDs with a focus on: congruence with NCSC prioritized grade-level academic content; progression across performance levels; progression across grades; and consistency across mathematics and ELA. The synthesized feedback for both the mathematics and ELA PLD review focused on

- simplifying and clarifying the PLD descriptors; reducing the amount of text; breaking apart complex descriptors;
- revising terminology and levels of complexity to ensure consistency with prioritized content and consistency across the PLDs;
- checking horizontal and vertical articulation;
- ensuring understanding of the purpose and use of the different types of PLDs;
- providing context for interpreting the descriptors in the PLDs;
- creating supplementary materials to support interpretation and use of the grade-level PLDs; and
- providing examples that demonstrate changes in, e.g., complexity or DOK level.

## PHASE 2: REVISION AND REFINEMENT OF INITIAL DRAFT PLDS

NCSC shared drafts of the revised grade-level PLDs with the NCSC TAC. K ey feedback from the TAC review emphasized

- describing the relationships among assessment claims, policy PLDs, and grade-level PLDs;
- clarifying how content changes across grade levels and performance levels within grade levels;
- clarifying how the PLDs reflect college and career readiness;
- describing how passage complexity changes across performance levels and grade levels for ELA reading PLDs;
- considering using vertical progressions and item mapping to help parents/guardians understand their child's performance; and
- examining the dimensionality of the PLDs through future research to determine how the content and supports interact.

Subsequent to the TAC review, NCSC content leads and measurement experts updated all NCSC state and organizational partners about feedback from the previous reviews and suggestions for changes to the grade-level PLDs. Additional feedback from this presentation focused on the following four areas:

- Purpose and Use
o Streamline the documents for ease of use.
o W rite descriptors in a language applicable to the intended audiences (e.g., documentation for parents/guardians and teachers).
o K eep in mind user background, experiences, and knowledge base.
- Language Use
o Reduce repetition.
o Clarify or remove ambiguous terms such as "occasional use," "moderate complexity," "low complexity," etc.
- Suggestions for Revising PLDs
o Build a framework that gives a context to student performance.
o Provide an introduction that describes students at each grade.
o Provide an overview describing the impact of complexity and provide examples of content to clarify user understanding.
o Be clear about what is changing and how change shows up within and across grades.
o Operationalize terms to ensure accurate interpretation.
- Develop Supporting Documents and a User Guide
o Support in interpreting and applying the information.
o Help users integrate information from the assessment and the PL Ds to support student achievement and growth.
B ased on the comprehensive input received across reviews, NCSC content and measurement experts implemented a three-step process to inform the next stage of refinement and revision of the draft grade-level PLDs. State and organizational partners approved the process prior to its implementation. In the first step of the PLD revision process, NCSC content and measurement experts analyzed the degree to which the assessment characteristics impacted the student performance descriptors. The item characteristics included DOK, overall difficulty of content and concepts, item features, item supports, and passage complexity (ELA reading only). The goal of this review was to ensure that the four levels of graduated complexity resulting from the use of a principled design approach, did not, by default, define the four performance levels. The project determined that student performance levels should have descriptors based on an understanding of expected student progress within and across years.

The second step in the process focused on articulating three types of expectations vertically across grades 3-8 and 11:

- Student L earning Expectations based on grade-specific learning outcomes- these expectations focus on instructional content and described end-of-year learning expectations for mathematics and ELA at each grade level.
- M easurement Expectations based on the knowledge and skills defined through the academic content prioritized for assessment at each grade level.
- M easurement T argets based more narrowly, when applicable, on the subset of prioritized expectations used to develop items for the spring 2015 operational assessment. In some cases the $M$ easurement $T$ argets represented all aspects of the $M$ easurement Expectations.
NCSC content, measurement, and significant disabilities experts collaborated to create clear, concise descriptions of expectations for student learning in mathematics and ELA. These descriptions flowed from the project's academic grade-level learning targets as well as the learning outcomes identified in the Learning Progressions Frameworks (Hess \& K earns, 2010). In addition, experts checked the student learning expectations against grade-level expectations from the Common Core State Standards. This team also clarified language in the expectations for measurement (i.e., the M easurement Expectations and the $M$ easurement Targets) drawn from the prioritized academic grade-level targets.

The three sets of specifications resulting from this work showed NCSC's progression of expectations for learning and assessment within and across grade levels. The Student Learning and $M$ easurement Expectations provided a context for interpreting student performance using the PL Ds while the M easurement Targets provided a direct tool for refining and/or revising the grade-level PLDs.

The final step focused on using the information from the first two steps to update the grade-level PLDs. NCSC content and measurement experts used, in particular, the M easurement Targets to examine the draft grade-level PLDs within and across grades and to refine the descriptors at each performance level. M ore specifically, this focused on ensuring: representation of intended expectations; differentiation across performance levels; and representation of the impact of graduated complexity on a student's ability to demonstrate K SA s.

NCSC content and measurement experts provided information to the NCSC TAC including a brief review of the ongoing development of the grade-level PLDs; an example of the revised grade-level PLDs at grade 4 for mathematics and ELA reading; and an overview of the work completed to create Student Learning Expectations and $M$ easurement Expectations.

The TAC members were in support of the approach taken to revise the grade-level PLDs. They provided the following overall suggestions for next steps:

- Use some of the more precise skills that students are able to do or are working toward in each of the PLD levels.
- K eep the end and end user(s) in mind to ensure the end product is both interpretable and useful.
- Display the PLDs to show more clearly how the descriptors progress across levels.
- Ensure the end user is clear and understands that what is in a lower level of a particular PLD is presumed in the higher level but with more challenging content and/or greater complexity.
NCSC content and measurement experts, with input from the A ssessment Steering Committee state partners, revised the PLDs to address the TAC feedback and recommendations in preparation for a NCSC M athematics and ELA PLD Review M eeting with State Education A gency (SEA) and Local Education A gency (LEA) special educators and content experts. NCSC convened this team to compare descriptors across performance levels at each grade level within a content area, compare descriptors across grade spans within a content area, and evaluate the PLDs against the Students Learning and M easurement Expectations. Participants within a grade level considered how complexity, knowledge, skills, and supports were integrated into the PL Ds. Participants across grade spans compared the K SA s embedded in the descriptors at a given level (e.g., proficient) across a grade span to understand comparability, complexity, and reasonableness of progressions across grades. The input from the SEA-LEA team review provided guidance to improve the clarity and interpretability of the PLD language. For example, they recommended:
- Provide degrees of differentiated complexity and support across the PLD levels; have no more than two degrees of complexity describing performance at given level of the PLDs.
- M ake the connection between the PLD descriptors and the M easurement Targets more explicit and easier to track.
- Develop the Front $M$ atter for ELA and $M$ athematics PLDs that provide a definition, purpose, and description of the content of the PLDs and the item supports.

In early 2015, the TAC and the NCSC Steering Committee provided specific feedback regarding the inclusion of writing in the ELA PLDs given the exclusion of the constructed-response writing prompts from scoring for the 2015 operational assessment. B ased on input at this meeting, NCSC partners decided to exclude statements about higher achievement levels in writing from the 2015 ELA PLDs. The TAC recommended that NCSC continue work on scoring of the writing prompts to provide evidence for the higher achievement levels in the future.

## PHASE 3: FINALIZING THE PLDS

NCSC content and measurement experts continued iterations to apply feedback from the SEA -LEA team and the NCSC TAC as well as data from the Pilot 1 test conducted in spring 2014 and the Pilot 2 test conducted in fall 2014. NCSC experts considered how the Pilot data influenced the placement of each PLD descriptor in a particular complexity category and performance level. Use of these data also resulted in some individual PLD statements being excluded from a particular PLD level (e.g., some Essential Understanding language appears in PLD level 2 but not in level 1).

In the spring of 2015, NCSC content and measurement experts provided updated versions of the grade-level PLDs, incorporating all feedback previously described, to NCSC state and organizational partners for review. Reviewers used historical documentation from the development process, with the updated draft grade-level PLDs, to evaluate and provide feedback with regard to the most recently drafted PLDs for each content area within a grade and across grades for grades 3-8 and 11. NCSC content and measurement experts compiled reviewer feedback and presented updated versions of the PLDs to the NCSC A ssessment Steering Committee and the TAC for a final round of feedback. Input from these reviews was compiled and applied to prepare the final draft grade-level PLDs and front matter for presentation to all NCSC state partners. NCSC organizational partners presented the state partner group with the following basic assumptions regarding the structure and content of the PLDs:

- All prioritized grade-level academic K SA s were addressed within the Level 3 descriptor in all grades for mathematics and for the reading portion of ELA. The other performance levels contained varying degrees of representation of the assessed skills, as related to difficulty and relevance to the level of performance.
- The layout of the PLDs was based on the premise that students performing at a higher level can demonstrate the skills at a lower level.
- Skills were placed in one of three degrees of support or text complexity across the four performance levels at a given grade.
- The same skills were not placed within the same degree of support or text complexity across two adjacent PLD levels.
State partners provided feedback to specific questions that addressed descriptions of text and task complexity, inclusion of foundational skills in reading, language used for the ELA writing descriptors, and the format of the PLDs for use in standard setting. Content and measurement experts applied this feedback to finalize the front matter and drafts of the grade-level PLDs for mathematics and ELA for use at standard setting (A ppendix B).

## SUMMARY

NCSC's iterative and comprehensive development process resulted in clarity with respect to how content and performance expectations, as well as complexity and support, change within and across grade levels; explication of the dimensionality embedded in the grade-level PLDs and how components of that dimensionality interact; development of a framework around the PLDs that provides a context for interpreting student performance; creation of an overall description of student learning expectations at each grade level; and streamlining the PLDs while ensuring the language is interpretable to the intended audiences. In addition, NCSC's in-depth examination of the grade-level PLDs within and across grade levels and content areas focused on ensuring the PLDs provided progressive descriptions of what students with the most significant cognitive disabilities are expected to know and be able to do as an outcome of progress across grades toward
the end goal of college, career, and community readiness. The descriptors aligned with the K SA s prioritized for the NCSC assessments. NCSC's development process resulted in a context for interpretation and use of the grade-level PL Ds that ensured clarity and supported the connection betw een the measurement and instructional contexts developed within the NCSC system.

## Appendix B—Performance Level <br> Descriptor Front Matter and Performance Level Descriptors

## General Description

Performance Level Descriptors (PLDs) describe how well a student has learned the content and skills measured by the NCSC Alternate Assessment based on Alternate Achievement Standards (AA-AAS). Four performance categories describe the NCSC assessment results. The assessments measure what a student knows and is able to do in the tested subjects of English Language Arts (ELA) and mathematics in grades 3-8 and grade 11. The PLDs indicate whether a student's performance is on target to meet academic expectations or if there are gaps in learning. The test results are one way teachers find out what a student has learned and in what areas a student needs more help; the test results help teachers, schools, parents and guardians build a path to student learning.

NCSC developed the AA-AAS items in reading, writing, and mathematics to present a range of complexity and difficulty. All items, passages, and response options can be read aloud and reread to the student. Most of the assessment items ask the student to select the correct response (e.g., selected-response). Some items ask the student to construct a response using materials provided through the assessment. Each item addresses grade-specific academic content targets and provides students with the opportunity to respond independently and show what they know and can do.

## Reading Text Complexity

The PLDs for reading include references to text complexity. All literary and informational reading items are passage-based for which all topics are grade- and age-appropriate. All reading passages are to be read aloud to a student or signed if the student is deaf.

The table below describes some of the general characteristics included in the low to high text complexity used in the NCSC AA-AAS. For example, the length of the passages increases from low to high complexity text.

## Low Text Complexity <br> Moderate Text Complexity

## High Text Complexity

- Brief text with straightforward ideas and relationships
- Short, simple sentences
- Text with clear, complex ideas and relationships
- Simple and compound sentences
- Text with detailed and implied complex ideas and relationships
- A variety of sentence types including phrases and transition words

## Low Text Complexity

These texts present grade- and age-appropriate narratives or information. The text is presented in a clearly sequenced and organized manner and includes text features such as illustrations, headings, and diagrams to support comprehension. Vocabulary used in these texts and items includes commonly used words. Low complexity texts
support those students gaining meaning from text. These students require teacher support, during instruction, to comprehend text at a moderate complexity level.

## Moderate Text Complexity

These texts present narratives or information in a straightforward text structure. However, texts include more information and more complex ideas and relationships than the low complexity texts. Narrative texts include both literal and interpretive meanings. Informational texts use clear formats, illustrations, and graphics to convey information. Vocabulary used in these texts and items includes varied and descriptive language. Moderately complex texts support those students that require teacher support, during instruction, to comprehend text at a high complexity level.

## High Text Complexity

These texts present narratives or information in a text structure that requires students to comprehend what is stated or implied and make connections between ideas. These texts require students to make judgments about what they read and demonstrate an understanding of the content. The texts are of greater length than the low and moderate complexity texts and include abstract language and challenging vocabulary.

## General Description

Performance Level Descriptors (PLDs) describe how well a student has learned the content and skills measured by the NCSC Alternate Assessment based on Alternate Achievement Standards (AA-AAS). Four performance categories describe the NCSC assessment results. The assessments measure what a student knows and is able to do in the tested subjects of English Language Arts (ELA) and mathematics in grades 3-8 and grade 11. The PLDs indicate whether a student's performance is on target to meet academic expectations or if there are gaps in learning. The test results are one way teachers find out what a student has learned and in what areas a student needs more help; the test results help teachers, schools, parents and guardians build a path to student learning.

NCSC developed the AA-AAS items in reading, writing, and mathematics to present a range of complexity and difficulty. All items, passages, and response options can be read aloud and reread to the student. Most of the assessment items ask the student to select the correct response (e.g., selected-response). Some items ask the student to construct a response using materials provided through the assessment. Each item addresses grade-specific academic content targets and provides students with the opportunity to respond independently and show what they know and can do.

## Mathematics Task Complexity

The PLDs for mathematics include references to task complexity. All mathematics items are grade- and age-appropriate. All items are to be read aloud to a student or signed if the student is deaf.

The table below describes some of the general characteristics included in the low to high task complexity used in the NCSC AA-AAS. For example, the complexity increases in the low to high complexity tasks from the application of basic arithmetic facts with various concrete materials to problem solving using the conventions of written mathematics notation and operations.

## Low Task Complexity Moderate Task Complexity

## High Task Complexity

- Simple problems
- Use of common mathematical terms and symbols
- Common problems presented in mathematical context
- Use of various mathematical terms and symbols
- Multiple mathematical ideas presented in problems
- Use of various mathematical terms and symbolic representations of numbers, variables, and other item elements

## Low Task Complexity

These tasks present mathematical problems in a clear and organized manner with simple arrangements of numerals and symbols. These types of tasks address present grade- and age-appropriate content using common terms to support a student's application of basic number facts and computation. These tasks include pictorial representations paired with standardized verbal descriptions of each quantity. Low complexity tasks support those students developing comprehension of mathematical concepts and problem solving. These students require teacher support, during instruction, to demonstrate skills at a moderate task complexity level.

## Moderate Task Complexity

These tasks present mathematical problems in the context of the language and symbolic notation system of mathematics. Mathematical language and symbolic representations (e.g., <, >, =) are incorporated into a sequence of steps, to make explicit the application of the quantities and operations required to solve problems. These tasks provide basic fact references. Moderate complexity tasks support those students that may require teacher support, during instruction, to demonstrate application and problem solving skills on high complexity tasks.

## High Task Complexity

These tasks present mathematical problems which require students to analyze mathematical situations and apply appropriate concepts of quantities and operations to demonstrate an understanding of how to solve problems. Students must make connections between mathematical concepts, the language of mathematics, and mathematical symbols. These tasks are generally harder than the low and moderate complexity tasks.

Grade 3 ELA Performance Level Descriptors

| Level 1 | Level 2 | Level 3 | Level 4 |
| :---: | :---: | :---: | :---: |
| Low text complexity - <br> Brief text with straightforward ideas and relationships; short, simple sentences. | Low text complexity - <br> Brief text with straightforward ideas and relationships; short, simple sentences. | Moderate text complexity - <br> Text with clear, complex ideas and relationships and simple; compound sentences. | High text complexity - <br> Text with detailed and implied complex ideas and relationships; a variety of sentence types including phrases and transition words. |
| In reading, he/she is able to: <br> - identify the topic of a literary text <br> - identify a detail from a literary text <br> - identify a character or setting in a literary text <br> - identify the topic of an informational text <br> - identify a title, caption, or heading in an informational text <br> - identify an illustration related to a given topic <br> - identify a topic presented by an illustration <br> - identify the meaning of words (i.e., nouns) | In reading, he/she is able to: <br> - determine the central idea and supporting details in literary text <br> - determine the main idea and identify supporting details in informational text <br> - determine the main idea of visually presented information <br> - identify the purpose of text features in informational text <br> - use information from charts, graphs, diagrams, or timelines in informational text to answer questions <br> - use context to identify the meaning of multiple meaning words | In reading, he/she is able to: <br> - determine the central idea and supporting details in literary text <br> - determine the main idea and identify supporting details in informational text <br> - determine the main idea of visually presented information <br> - identify the purpose of text features in informational text <br> - use information from charts, graphs, diagrams, or timelines in informational text to answer questions <br> - use context to identify the meaning of multiple meaning words | In reading, he/she is able to: <br> - determine the central idea and supporting details in literary text <br> - determine the main idea and identify supporting details in informational text <br> - determine the main idea of visually presented information <br> - identify the purpose of text features in informational text <br> - use information from charts, graphs, diagrams, or timelines in informational text to answer questions <br> - use context to identify the meaning of multiple meaning words |
|  | AND with Moderate text complexity Text with clear, complex ideas and relationships and simple; compound sentences. | AND with High text complexity - <br> Text with detailed and implied complex ideas and relationships; a variety of sentence types including phrases and transition words. |  |
|  | - use details from a literary text to answer specific questions <br> - describe the relationship between characters, and character and setting in literary text | - use details from a literary text to answer specific questions <br> - describe the relationship between characters, and character and setting in literary text |  |
|  | AND with accuracy, he/she is able to: <br> - identify simple words (i.e., words with a consonant at the beginning, a consonant at the end, and a short vowel in the middle) | AND with accuracy, he/she is able to: <br> - identify grade level words |  |
| AND in writing, he/she is able to: <br> - identify a statement related to an everyday topic | AND in writing, he/she is able to: <br> - identify elements of a narrative text to include beginning, middle, and end <br> - identify the category related to a set of facts | AND in writing, he/she is able to: <br> - identify a text feature (e.g., captions, graphs or diagrams) to present information in explanatory text |  |

Grade 4 ELA Performance Level Descriptors

| He /she is able to: <br> - arrange a given number of objects into two sets in multiple combinations <br> - match an equation with a variable to a provided real world situation <br> - determine whether a given point is or is not part of a data set shown on a graph <br> - identify an extension of a linear graph <br> - use a table to match a unit conversion <br> - complete the formula for area of a figure | $\mathrm{He} /$ she is able to: <br> - identify the model that represents a square number <br> - identify variable expressions which represent word problems <br> - identify the hypotenuse of a right triangle <br> - identify the greatest or least value in a set of data shown on a number line <br> - identify the missing label on a histogram <br> - calculate the mean and median of a set of data <br> - identify the linear representation of a provided real world situation <br> - use an equation or a linear graphical representation to solve a word problem | He /she is able to: <br> - compute the value of an expression that includes an exponent <br> - identify variable expressions which represent word problems <br> - solve real world measurement problems that require unit conversions <br> - find the missing attribute of a threedimensional figure <br> - determine two similar right triangles when a scale factor is given <br> - make predictions from data tables and graphs to solve problems <br> - plot data on a histogram <br> - calculate the mean and median of a set of data <br> AND with High task complexity Common problems presented in mathematical context using various mathematical terms and symbols <br> - identify the linear representation of a provided real world situation <br> - use an equation or a linear graphical representation to solve a word problem <br> - identify a histogram which represents a provided data set | $\mathrm{He} /$ she is able to: <br> - identify variable expressions which represent word problems <br> - solve real world measurement problems that require unit conversions <br> - determine two similar right triangles when a scale factor is given <br> - make predictions from data tables and graphs to solve problems <br> - plot data on a histogram <br> - calculate the mean and median of a set of data |

## Appendix C- Meeting Agenda

## National Center and State Collaborative

Alternate Assessment Based on Alternate Achievement Standards (AA-AAS)

## Standard Setting

## State Partners

August 10-13, 2015
Indianapolis, Indiana

## Day 1* (August 10)

| Activity/Presentation | Location | Presenter |
| :--- | :--- | :--- |
| Sign in and continental breakfast <br> $(8: 00$ am $-8: 30 \mathrm{am})$ | General Session Room |  |
| Welcome, Introductions, and Thank You | General Session Room | Measured Progress, EdCount |
| Review Agenda and Materials <br> Role of Panelists | General Session Room | Susan Izard, Measured Progress |
| General Orientation to the NCSC AA-AAS | General Session Room | Phyllis Lynch, Rhode Island |
| Standard-Setting Process Overview | General Session Room | Psychometrician, Measured <br> Progress |

Break (transition to break-out rooms)

| Individual Group Introductions <br> Review Alternate Performance Level Descriptors <br> (for first grade level [3, 5, 7, or 11]) <br> Performance Level Discussions | Break-out Rooms | Measured Progress Facilitator |
| :--- | :--- | :--- |
| Lunch <br> $(12: 00 \mathrm{pm}-12: 50 \mathrm{pm})$ | General Session Room |  |
| Standard-Setting Process <br> (for first grade level [3, 5, 7, or 11]) | Break-out Rooms | Measured Progress Facilitator |

Adjourn: by 5:00 PM
*Morning and afternoon breaks taken as needed.

Day 2* (August 11)

| Activity/Presentation | Location | Presenter |
| :---: | :---: | :---: |
| Breakfast (8:00 am - 8:30 am) | General Session Room |  |
| Standard-Setting Process (for first grade level [3, 5, 7, or 11]) | Break-out Rooms | Measured Progress Facilitator |
| Lunch $(12: 00 \mathrm{pm}-12: 50 \mathrm{pm})$ | General Session Room |  |
| Standard-Setting Process (for next grade level [4, 6, or 8]) | Break-out Rooms | Measured Progress Facilitator |

Adjourn: by 5:00 PM
Day 3* (August 12)

| Activity/Presentation | Location | Presenter |
| :--- | :--- | :--- |
| Sign in and breakfast <br> $8: 00$ am $-8: 30 \mathrm{am}$ | General Session Room |  |
| Standard-Setting Process <br> (for next grade level [4, 6, or 8]) | Break-out Rooms | Measured Progress Facilitator |
| Lunch <br> $(12: 00 \mathrm{pm}-12: 50 \mathrm{pm})$ | General Session Room |  |
| Standard-Setting Process <br> (for next grade level [4, 6, or 8$])$ | Break-out Rooms | Measured Progress Facilitator |

Adjourn: by 5:00 PM

## Day 4* (August 13)

| Activity/Presentation | Location | Presenter |
| :--- | :--- | :--- |
| Sign in and breakfast <br> $8: 00$ am $-8: 30 \mathrm{am}$ | General Session Room |  |
| Welcome <br> Overview of Cross-Grade Articulation Process | General Session Room | Susan Izard, Measured Progress |
| Math articulation process | General Session Room | Jennifer Dunn, Measured Progress |
| Lunch <br> (12:00 pm - 12:50 pm) | General Session Room |  |
| ELA articulation process | General Session Room | Jennifer Dunn, Measured Progress |
| State Review \& Approval of Cut Scores | General Session Room | Representatives from NCSC <br> Member States |

Adjourn: by 4:00 PM
*Morning and afternoon breaks taken as needed.

## Appendix D—Non-Disclosure Agreement FORM

# National Center and State Collaborative 

NONDISCLOSURE AGREEMENT

## Standard Setting

The NCSC Alternate Assessment Based on Alternate Achievement Standards is a program of the National Center and State Collaborative. The design of the program requires that the test materials remain secure. To maintain the security of the test, only authorized persons are permitted to view the assessment materials.

I understand that it is my professional responsibility to maintain the security of the test materials and student responses. I will never reproduce, discuss, or in any way release, share, or distribute the assessment materials to unauthorized personnel.

The undersigned is an employee, contractor, consultant or committee member for the National Center and State Collaborative, or person otherwise authorized to view secure NCSC materials and hereby agrees to be bound to the terms of this agreement restricting the disclosure of said materials.

| Numbers |  |
| First | Last |
| - | - |

Directions: Please enter the range of ordered item numbers that fall into each performance level category according to where you placed your bookmarks.

Note: The ranges must be adjacent to each other. For example: Level 1: 1-8, Level 2: 9-15, Level 3: 1624, Level 4: 25-35.

## Appendix G—Sample Evaluation Forms

$\qquad$

## Standard Setting Final Evaluation

Please complete the information below. Your feedback will provide a basis for evaluating the training, methods, and materials. Do not put your name on the form. We want your feedback to be confidential.

Gender: $\quad$ Male $\square \quad$ Female $\square$
Race/ethnicity: White $\square$
BlackHispanic $\qquad$ Asian $\square$ Pacific Islander $\square$American Indian $\square$

Years of experience in education: 0-5 6-10

11-15More than $15 \square$
Area of Expertise (Check all that apply):
Students with Disabilities
Students with Limited English Proficiency
Economically Disadvantaged Students
Gifted and Talented Students
General Education

Please rate the usefulness of each of the following:

The opening session.
The small group activities.
Becoming familiar with the assessment.
Completing the Item Map Form.
Articulating the borderline differences between the performance levels.

Discussions with other participants.
Impact data.

## Please mark the appropriate box for each statement.

I understood the goals of the standard setting meeting.
I understood the procedures we used to set standards.
The facilitator helped me understand the process.
The materials contained the information needed to set standards.
I understood how to use the materials provided.
The borderline performance level definitions were clear.
I understood how to make the cut score judgments.
I understood how to use the feedback provided after each round.
I understood how to use the impact data.
I understood how the cut scores were calculated.
The facilitator was able to get answers to my questions.
Sufficient time was allotted for training on the standard setting tasks.
Sufficient time was allotted to complete the standard setting tasks.
The facilitator helped the standard setting process run smoothly.
Overall the standard setting process produced credible results.

Please provide any additional comments about the standard setting process or suggestions as to how the training and process could be improved.
$\qquad$

# Standard Setting Procedural Evaluation 

## Please rate the usefulness of each of the following:

I understood how to make the cut score judgments.
I understood how to use the materials provided.
I understood how to record my judgments.
I think the procedures make sense.
I am sufficiently familiar with the assessment.
I understand the differences between the performance levels.

Please rate the influence of the following when setting standards:

The performance level descriptors.
The borderline performance level details.
My expectations of students.
The difficulty of the test materials.
My experience in the field.
Discussions with other participants.
Cut scores of other participants.
Impact data.

What materials, information, or procedures were most influential in your placement of the cut scores? Why?

Do you believe the final recommended cut score for each of the performance levels is too low, about right, or too high?

Level 4/Level 3
Level 3/Level 2
Level 2/Level 1

## Standard Setting Training Evaluation

The purpose of this evaluation form is to obtain your feedback about the training you have received. Please complete the information below. Do not put your name on the form. We want your feedback to be confidential.

Please mark the appropriate box for each statement.

I understand the goals of the standard setting meeting.
I understand the procedures we are using to set standards.
I understand how to use the standard setting materials.
I understand the differences between the performance levels.
I understand how to make the cut score judgment.
I am confident in my conceptualization of $50 \%$ of the borderline students answering questions correctly.

I know what tasks to expect for the remainder of the meeting.
I am confident in my understanding of the standard setting task.

I am ready to proceed with the standard setting process.
$\square \mathrm{Yes}$
Please indicate any areas in which you would like more information before you continue.

Please indicate any questions you may have about the remainder of the standard setting meeting.

## Appendix H—Standard Setting Slide Presentation

## National Center and State Collaborative

## Standard Setting Overview Mathematics and ELA

Grades 3-8, and 11

## What is Standard Setting?

## Content Standards vs. Performance Standards

Content standards = "What"

- Describe the knowledge and skills students expected to demonstrate by content area and grade span

Performance standards = "How well"

- Describe attributes of student performance based on performance level descriptors

## Panelist Selection

- Represent all of the states that participated in the operational assessment
- Represent a variety of expertise
- Special education and students with significant cognitive disabilities
- Content expertise- mathematics and ELA
- Low incidence expertise- vision and hearing

## What is Your Role?

To recommend cut scores for each of the performance levels that will be used to report results:

- Level 4
- Level 3
- Level 2
- Level 1

## We are Trying to Determine

- What knowledge, skills, and abilities (KSAs) need to be demonstrated to be classified in each performance level?
- How much is enough?
- What test performance corresponds to Level 1 performance?
- Level 2
- Level 3
- Level 4

## Performance Continuum

Level 1
Level 2
Level 3
Level 4

## Based on Performance Level Descriptors, You Will Recommend Cut Scores...

Performance Continuum

## General Phases of Standard Setting

## Data-collection <br> 

Policy-making/Decision-making

## Final Recommendations

- Your recommendations will be reviewed and presented to the policy makers, responsible for final adoption of the cut scores.
- The recommendations may be accepted, rejected, or modified by the State Partners.

Overview of the Bookmark
Standard Setting Method

## Today's Training

We will cover

- Implementation of the Bookmark procedure

Note

- This session is intended to be an overview
- Your facilitator will give you more details and guide you through the process step by step

## Cut Score Recommendations

- Level 1
$\longleftarrow$ Cut Score
- Level 2
$\longleftarrow$ Cut Score
- Level 3
$\longleftarrow$ Cut Score
- Level 4

## Factors that Influence Selection of Standard-Setting Method

- Prior usage/history
- Recommendation/requirement by policy-making authority
- Type of assessment

Bookmark method chosen

## Important Terms to Know

- Test items
- Performance Level Descriptors
- Knowledge, skills, and abilities (KSAs) needed to answer each test question
- "Borderline" students
- Cut scores

## What is the Bookmark Method and How Does It Work?

- A collection of test items is ordered from easiest to most difficult in an Ordered Item Book.
- Panelists place one or more "bookmarks" in that book of items to delineate the different performance levels.
- For the NCSC assessments there will be 3 bookmarks/cuts placed.

## The Process: Before You Place the Bookmarks

- Take the test to familiarize yourself with the test taking experience.
- Review and discuss the Performance Level Descriptors.
- Review the Ordered Item Book.
- Complete an Item Map Form, which involves identifying the knowledge, skills, and abilities specific to each item.
- Using the Performance Level Descriptors provided, develop the definition of "borderline" for each performance level.

## Review PLDs and Develop Borderline Descriptions

- Individual review of Performance Level Descriptors.
- Group Discussion of what student performance in each performance level looks like.
- Focus on the "borderline" students, i.e., students who just barely make it into Level 4, Level 3, and Level 2.

## Review PLDs and Develop Borderline Descriptions

Create bulleted lists of

- The knowledge, skills, and abilities a student must demonstrate to just barely be classified in each performance level.
- The knowledge, skills, and abilities that distinguish one performance level from another.

You must reach consensus as a group about the KSAs that define borderline student performance at each performance level.

## Bookmarking the Ordered Item Booklet: Practice Round

You will be given an ordered item book with approximately 5 items to practice the bookmark placement for the cut point between Level 2 and Level 3 PLDs.

## Materials

Your facilitator will review the use of all materials during the practice round, including:

- Ordered Item Book/Key
- Item Map Form
- Rating Sheet
- Performance Level Descriptors and Borderline Descriptors
- Training Evaluation Form

## How to Place a Bookmark

- Start at the beginning of the ordered item booklet.
- You will be setting the bookmark between Levels 2 and 3 first as this is the cut that delineates non-proficient and proficient.
- Evaluate whether students who demonstrate knowledge and skills at the borderline of Level 3 would correctly answer the item: If Yes move on to the next item.
- Place the bookmark where you think Level 3 "borderline" students would no longer correctly answer the item.
- Proceed through the Ordered Item Book and make this evaluation for each performance level (3, 2, 4).

## How to Place a Bookmark

| Item Number | Would students who demonstrate skills at the Level 2-Level 3 "borderline" correctly answer this item? |
| :---: | :---: |
| ... | Yes |
| 12 | Yes |
| 13 | Yes |
| 14 | Yes |
| 15 | Yes |
| 16 | Yes |
| 17 | Yes |
| 18 | Yes |
| 19 | No |
| 20 | Yes |
| 21 | Yes |
| 22 | No |
| 23 | No |
| 24 | No |
| 25 | No |
| $\cdots$ | No |

## How to Place a Bookmark

- In this example, the bookmark would go between items 21 and 22.
- You will have opportunities to discuss your bookmark placements and change them, if desired.
- Place one bookmark for each of the cut scores (between each performance level).

## Check for Understanding

- Your facilitator will check with you for understanding and answer any questions you may have during and after the practice round.
- You will then complete a training evaluation form.

## Bookmarking: Three Rounds

Round 1 (Individual Work)

- The first cut that will be set will be the Borderline Performance Level 3 cut.
- For this round, you will work individually, without consulting with your colleagues.
- Beginning with the first ordered item in the OIB evaluate each item in turn.

## Bookmarking: Three Rounds

Round 1 (Individual Work)

- Gauge the level of difficulty of each of the items for those students who barely meet the definition of Performance Level 3.
- Would students performing at the borderline of Performance Level 3 answer the question correctly?
- Place the bookmark where you believe the answer of 'yes' turns to 'no'.

## Bookmarking: Three Rounds

Round 1 (Individual Work)

- The same process is then repeated for the Performance Level 1/Performance Level 2 and Performance Level 3/Performance Level 4 cuts.

## Bookmarking: Three Rounds

Round 2 (With Table Discussion)

- Discuss the first-round bookmark placements (focus on the KSAs and borderline descriptions) at your table.
- Examine your cutpoints in relation to the table results.
- Review and revise placement of bookmarks as appropriate using the same process as described in Round 1.

## Bookmarking: Three Rounds

Round 3 (With Whole Group Discussion)

- Discuss the second-round bookmark placements (focus on the KSAs and borderline descriptions) as a whole group.
- Examine your cut points in relation to the table and whole group results and impact data.
- Review and revise placement of bookmarks as appropriate using the same process as described in Round 1.

## Role of the Facilitators

- Lead and keep the group on track.
- Ensure that all panelists clearly understand the procedures.
- Ensure that the evaluation forms are completed.
- Table leaders will guide discussion during the $2^{\text {nd }}$ round of ratings.

## A Few Reminders

- It is not necessary for panelists to reach consensus as to how the items should be categorized.
- You should be open-minded when listening to your colleagues' rationales for their ratings.
- You may or may not change your mind as a result of the discussions.
- We want each panelist to use his or her own best judgment in each round of rating.

## After the Bookmark....

## Evaluation

## Your honest feedback is important!

## Ground Rules

- The process is focused solely on recommending performance standards (cut scores).
- Role of facilitator is to lead and keep the group on track.
- The performance levels and their definitions are not open for debate.
- Panelists' recommendations are vital, but final cut score decisions will be made by the Partner States.
- Each panelist must complete an evaluation form at the end of the process.
- Each panelist must participate in the entire process or his/her judgments will be discounted.
- No cell phone use except during breaks and outside of the panel room.
- Please be sure to arrive on time each day.

## What's Next?

- Insert panel and room assignments here

## And That's It....

Please make sure to ask your facilitators any questions you may have about the Bookmark procedure.

## Good Luck!

## NCSC Assessment Overview

Phyllis Lynch, Director, Office of Instruction, Assessment \& Curriculum; Rhode Island Department of Elementary \& Secondary Education

## ncsc

## National Center and State Collaborative

## NCSC Overview

- What is the Goal of NCSC?
- Who are the Students
- How was the Goal Accomplished?
- How was the Assessment Developed?
- What does the Assessment Look Like?

## NCSC Goal

To ensure that students with the most significant cognitive disabilities achieve increasingly higher academic outcomes and leave high school ready for post-secondary options.

## Who are the Students?

~30,000 students tested in Spring 2015

- Significant cognitive disability
- Extensive direct individualized instruction
- Substantial supports

## Accomplishing the Goal

- Received funding from the Federal Government
- Reviewed the academic literature and best practices
- Investigated and understood student needs
- Made content accessible
- Create rigorous curricular and instructional resources
- Provide training for teachers
- Developed assessment

## Developing the NCSC Assessment

## The NCSC Assessments

## English-language Arts

- Literary Text
- Informational Text
- Reading Foundational (grades 3,4)
- Writing

Mathematics

- Operations and Algebraic Thinking/Algebra and Functions/Expressions and Equations
- Number and Operations Base Ten/Number System
- Number and Operations Fractions/Ratio and Proportions
- Measurement and Data/Statistics and Probability
- Geometry

## NCSC Assessment Overview

## The NCSC Assessment

- Assessments in Math and ELA, which includes both reading and writing, for grades 3-8 and 11
- Around 30-35 items for each subject, mostly selected response
- Direct student interaction with online testing program or the teacher may print out testing materials and enter student responses into the computer.

## NCSC Assessment Overview

## The NCSC Assessment

- Is designed to be read to the student by the screen reader or the test administrator- all passages, items, and response options.
- Allows for student-level adaptations, such as assistive technology for student response modes, scribing, and sign language.

## NCSC Item Types

- Selected-Response: Reading, Writing, Mathematics
- Constructed response: Mathematics Completion
- Open-response: Reading

## NCSC Assessment Administration: ELA

| NCSC ELA Test |  |  |
| :--- | :--- | :--- |

## Closing

Questions about developing the NCSC assessment?

## Appendix l—Facilitator Script

# GENERAL INSTRUCTIONS FOR NCSC STANDARD SETTING GROUP FACILITATORS 

## ELA

Grades 3-8, and 11
August 10-13, 2015

## Preliminaries

## Introductions:

1. Make sure that panelists are sitting at the correct tables. Tables have been assigned to ensure the distribution of panelists' backgrounds and expertise at each table.
2. Welcome group, introduce yourself (name, affiliation, a little selected background information).
3. Identify the Table Leader at each table- Table Leaders will facilitate the discussion for Round 2.
4. Have each participant introduce him/herself.
5. Ask each participant to sign a nondisclosure form. Do not proceed until a signed nondisclosure form has been collected from each participant.

## Review Panelist Folder Materials

Overview: To help set the context for the meeting and the materials that will be used provide a brief review of what is in each panelist's folder.
Left Side
Agenda
Non-Disclosure Form
Room Map
Reimbursement Form
Practice Round Evaluation
Process Evaluation
Right Side
Opening PowerPoint
Performance Level Descriptor Front Matter
Performance Level Descriptors
Item Map Form
Practice Round Rating Sheet

## Take the Test

Overview: In order to establish an understanding of the test items and for panelists to gain an understanding of the experience of the students who take the test, each participant will take the test for their grade level and content area. Panelists may wish to discuss or take issue with the items in the test. Tell them we will gladly take their feedback to NCSC. However, this is the actual assessment that students took and it is the set of items on which we must set standards.

## Activities:

1. Introduce the assessment :
a. Explain that there were 4 forms of the test, that Session 1 was the same for all students and that Session 2 differed based on the form of the test.
b. Also explain that Form 1 of the test was considered the most accessible for students with low vision and/or hearing impairments.
2. Tell panelists that they are about to take the actual NCSC assessment.
a. For the first grade level the test will be projected and you, the facilitator, will read each item aloud to the panelists from the Directions for Test Administration (DTA). This most closely mirrors the student experience.

At the start of the standard setting process for the second grade level you will project Session 1 of the test and read each item aloud from the DTA as you did for the first grade level. You will then pass out Session 2 of the test (DTA) and have panelists finish the test on their own. Once they are finished you will provide panelists with the Answer Key for Session 2.

For grades 3 and 4 ELA only, explain that there are a set of foundational items that students took individually, but which count as a set for scoring purposes. $3 / 3$ or $4 / 5$ items correct results in a score of 1 point.

Grade 3: Session 2, items 12-16, 4/5 = 1 point
Grade 4: Session 2, items 13-17, $4 / 5=1$ point
b. The purpose of the exercise is to help them establish a good understanding of the test items and to gain an understanding of the experience of the students who take the assessment.
c. The Answer Key for each item will be provided after each item is presented.
3. Tell panelists to try to take on the perspective of a student as they complete the test.

## Review and Discuss Performance Level Descriptors (PLDs)

Overview: The primary purpose of this activity is for panelists to familiarize themselves with the Performance Level Descriptors for the grade and content area. This will provide a level of context prior to reviewing the Ordered Item Booklets and filling out the Item Map Form.

## Activities:

1. Have panelists take out the PLD Front Matter and the PLDs from their folders.
2. Have panelists review the documents individually, taking notes and marking up the documents with any details and/or questions they may have.
3. After individually reviewing the descriptors, have panelists discuss each one as a whole group, starting with [Performance Level 2], and provide clarification. The goal here is for the panelists to have a collegial discussion in which to bring up/clarify any issues or questions, and to come to a common understanding of what it means to be in each performance level. It is not unusual for panelists to disagree with the Descriptors they will see; almost certainly there will be some panelists who will want to change them. However, the task at hand is for panelists to have a common understanding of what knowledge, skills, and abilities (KSAs) are described by each PLD.
4. Once panelists have a solid understanding of the PLDs, they will be ready to move to the next activity.

## Fill Out Item Map Form

Overview: The primary purpose of this activity is for panelists to think about what knowledge, skills and abilities (KSAs) are measured by each item as well as what makes one question harder or easier than another. The notes panelists take here will be useful in helping them place their bookmarks and in discussions during the rounds of ratings.

## Activities:

1. Pass out the Ordered Item Books and keys, and have panelists take out the Item Map Form
a. Have panelists record their book number on the sign out sheet and sign it
b. Have panelists write their standard setting ID (on their nametags) in the upper right corner of the form.
2. Review the Ordered Item Book and Item Map Form with the panelists. Explain what each is, and point out the correspondence of the ordered items between the two. Explain that the items are ordered from easiest to hardest, based on student performance from the most recent administration of the assessment.
3. Tell panelists they will work individually at first. After they have completed the Item Map Form, they will then discuss it as a whole group.
4. Starting with the first item, they will record for each item:
a. The knowledge, skills and abilities (KSAs) the item measures, and
b. their thoughts about what makes that question harder than the previous question.
5. Panelists should not agonize over these decisions. It may be that the second item is only slightly harder than the first. Panelists should keep in mind that the purpose of the task is to record notes that will be useful to them in completing their ratings and not necessarily to fill in every space on the form.
6. Once panelists have completed the Item Map Form, they should discuss them as a whole group.
7. Based on the whole group discussion, the panelists should modify their own Item Map Form (make additional notes, cross things out, etc...)

## Discuss Performance Level Descriptors (PLDs) and Describe Characteristics of the "Borderline" Student

Overview: In order to establish an understanding of the expected performance of borderline students on the test, panelists must have a clear understanding of:

1) The definition of the four performance levels, and
2) Characteristics of students who are "just able enough" to be classified into each level. These students will be referred to as borderline students, since they are right on the border between levels.

The purpose of this activity is for the panelists to obtain an understanding of the PLDs with an emphasis on characteristics that describe students at the borderline -- both what these students can and cannot do.

This activity is critical since the ratings panelists will be making will be based on these understandings.

## Preparation:

1. Use 3 sheets of chart paper and label the top of each one: Borderline Level 2, Borderline Level 3 and Borderline Level 4.

## Activities:

1) Introduce the task. In this activity they will:
a. individually review the Performance Level Descriptors again as needed;
b. generate whole group descriptions of borderline [Performance Level 2], [Performance Level 3] and [Performance Level 4] students.

The facilitator should compile the descriptions as bulleted lists on chart paper; the chart paper will then be posted so the panelists can refer to the lists as they go through the bookmark process.
2) Check to see if panelists want to discuss the performance levels again. Once they have a solid understanding of the PLDs, have them focus their discussion on the knowledge, skills, and abilities of students who are in the [Performance Level 2] category, but just barely. The focus should be on those characteristics and KSAs that best describe the lowest level of performance necessary to warrant [Performance Level 2] classification.
3) After discussing [Performance Level 2], have the panelists discuss characteristics of the borderline [Performance Level 3] student and then characteristics of the borderline [Performance Level 4] student. Panelists should be made aware of the importance of the [Performance Level 3] cut. This is the cut from non- proficient to just barely proficient.
4) Using chart paper, generate a bulleted list of characteristics for each of the levels. Post these on the wall of the room. Make sure that panelists agree on the bulleted characteristics and have a common understanding.

## Practice Round (First Grade only)

Overview of Practice Round: The primary purpose of the Practice Round is for panelists to become familiar with the task of placing the bookmarks. The facilitator will walk the panelists through the [Performance Level 3] bookmark placement on the practice set, engage the panelists in a readiness discussion and check for understanding. If any of the panelists indicate an incomplete understanding of the practice rating task, then the facilitator will continue to work with the panelists to clarify any misconceptions before proceeding to Round 1.

## Activities:

1. Make sure panelists have the following materials:
a. Practice ordered item set
b. Performance Level Descriptors
c. Item Map Form
2. Orient panelists to the practice ordered item set. Point out the following:
a. items are organized by difficulty from easiest to hardest;
b. the items represent the full range of difficulty included on the test.
3. Give the panelists time to read through the items.
4. The facilitator leads the group through a discussion of the [Performance Level 3] bookmark placement in the practice OIB.
a. Referring to the five ordered items in the practice set, the PLDs and the bulleted lists of characteristics posted on chart paper, the facilitator will lead a discussion about the placement of the [Performance Level 3] bookmark.
b. Panelists should consider the question:

Would at least $2 / 3$ rds of the students performing at the borderline of [Performance Level 3] answer the item correctly?
c. Where the answer changes from yes to no is where the bookmark should be placed. Note that panelists may find that they have a yes, no, yes,... they should place the bookmark at the preponderance of no. They will need to make a judgment.

## Readiness Discussion

After the panelists have placed bookmarks in the practice ordered item set, lead a readiness discussion by posing the following five questions.

The purpose of this discussion is to determine how well each panelist understands the bookmark task, to correct any misunderstandings, and if necessary, to identify panelists whose ratings should be excluded from the standard setting if their understanding doesn't improve.

The "correct" answers for each of the questions are listed directly under each question. Some common misunderstandings are also listed for questions one and two. Please watch for these typical misunderstandings and if they arise, redirect the panelists to the correct responses. Make sure any questions or concerns are resolved prior to moving on.

1. What questions should you ask for each item?

- Would $2 / 3^{\text {rds }}$ of the borderline students get this item correct?
- Would $2 / 3^{\text {rds }}$ of the students who just barely fall in the performance level of interest get this item correct?
Please watch for and correct the following responses.
- Omission of $2 / 3^{\text {rds }}$ ( $50 \%$, all students)
- Omission of borderline (all students, all students in the performance level of interest)

2. What is meant by the $2 / 3^{\text {rds }}$ rule?

- $2 / 3^{\text {rds }}$ of the borderline students would get items like this correct Please watch for and correct the following responses.
- All students falling in the performance level of interest have a $2 / 3$ rds chance of getting this item correct.

3. What population of students should you consider for each item?

- Borderline students
- Students who just barely fall in the performance level of interest
a. Does this population change as I progress through the items for the first bookmark? (NO)
b. Does this population change as I progress to the next bookmark? (YES)

4. As you approach a bookmark how do answers change?

- The answer to "Would $2 / 3$ rds of the borderline students get this item correct" should change from a "yes" to a "no"
- The confidence the panelist has in the yes/no answer will decrease as he/she approaches the bookmark placement

5. How should your confidence in the answers affect your bookmark placement?

- As you become less confident in a "yes" answer, the bookmark placement should be approaching.
- Where you are least confident in your answers is typically where the bookmark will be placed.

## Training Evaluation (First Grade Only)

After the panelists have placed the bookmark in the practice ordered item set and you've answered any questions, have panelists fill out the training evaluation form. Before you start the Round 1 activities, scan the completed evaluations to see if there are any problems, concerns, or questions that need to be addressed before proceeding. Make sure any questions or concerns are resolved prior to moving on. Return the completed evaluations to the data analysis work room at the next convenient opportunity.

## Round 1

Overview of Round 1: The primary purpose of Round 1 is to ask the panelists to make their initial judgments as to where the bookmark should be placed for each cut. The first cut that will be set will be the Borderline Performance Level 3 cut. For this round, panelists will work individually, without consulting with their colleagues. Beginning with the first ordered item in the OIB, panelists will evaluate each item in turn. The panelists will gauge the level of difficulty of each of the items for those students who barely meet the definition of [Performance Level 3]. The task that panelists are asked to do is to estimate whether a student performing at the borderline of [Performance Level 3], would answer each question correctly. More specifically, panelists should answer:

- Would at least $2 / 3^{\text {rds }}$ of the students performing at the borderline of [Performance Level 3] answer the question correctly?
The same process is then repeated for the [Performance Level 1/Performance Level 2] and [Performance Level 3/Performance Level 4] cuts.

## Activities:

1. Panelists should have their Ordered Item Books, Item Map Forms, and PLDs. Pass out one Rating Sheet to each panelist.
2. Have panelists write their ID number, content area, and grade on the Rating Sheet. The ID number is on the back of their name tags.
3. Provide an overview of Round 1, covering each of the following:
a. Orient panelists to the Ordered Item Book. Remind them that the items are presented in order of difficulty, from easiest to hardest.
b. The primary purpose of this activity is for the panelists to make their initial determination as to whether $2 / 3^{\text {rds }}$ of students whose performance is barely [Performance Level 3] would correctly answer each item, and to place their bookmark where they believe the answer of
'yes' turns to 'no'. Remind panelists that they should be thinking about $2 / 3$ rds of the borderline students. Once they have completed the process for the [Performance Level 2/Performance Level 3] cut, they will proceed to the remaining two cut points starting with [Performance Level 1/Performance Level 2] and then the [Performance Level 3/Performance Level 4] cut.
i. For grades 3 and 4 ELA only, explain that there are a set of foundational items that students took individually, but which count as a set for scoring purposes. $3 / 3$ or $4 / 5$ items correct results in a score of 1 point. These items have been placed in the Ordered Item Booklet as a set and should be considered in this manner, asking the question would $2 / 3$ rds of the students on the borderline get $X$ out $X$ correct in this set?
4. Grade 3: OIB \#25, $3 / 3=1$ point and IOB \#27, $4 / 5=1$ point
5. Grade 4: OIB \#22, $4 / 5=1$ point and OIB \#25, 3/3 = 1 point
c. Each panelist needs to base his/her judgments on his/her experience with the content, understanding of students, and the definitions of the borderline students generated previously.
d. One bookmark will be placed for each cut point.
e. If panelists are struggling with placing a particular bookmark they should use their best judgment and move on. They will have an opportunity to discuss their ratings and make revisions in Rounds 2 and 3.
6. Tell panelists that they will be discussing each cut point with the other panelists but that they will be placing the bookmarks individually. It is not necessary for the panelists to come to consensus about where the bookmarks should be placed.
7. Go over the rating form with panelists.
a. Lead panelists through a step-by-step demonstration of how to fill in the rating form.
b. Answer questions the panelists may have about the work in Round 1.
c. Once everyone understands what they are to do in Round 1, tell them to begin.
8. Starting with the first ordered item in the OIB and the [Performance Level 2/Performance Level 3] cut, the panelists will work through the OIB item by item and make their initial bookmark placements.
9. As panelists complete the task, ask them to carefully inspect their rating forms to ensure they are filled out properly.
a. The content area, grade, and ID number must be filled in.
b. The item numbers identifying each cut score must be adjacent.
c. Check each panelist's rating form before you allow them to leave for a short break.
d. When all the rating forms have been collected, the group will take a break. Immediately bring the rating forms to the data analysis work room for tabulation.

## Tabulation of Round 1 Results

Tabulation of Round 1 results will be completed by the data analysis team as quickly as possible after receipt of the rating forms.

## Round 2

Overview of Round 2: In Round 2, the panelists will discuss their Round 1 placements in table groups (facilitated by the Table Leader) and then revise their ratings on the basis of that discussion. They will discuss their ratings in the context of the ratings made by other members of their table group. The panelists with the highest and lowest ratings should comment on why they gave the ratings they did. The group should get a sense of how much variation there is in the ratings. Panelists should also consider the question, "How tough or easy a rater are you?" The purpose here is to allow panelists to examine their individual expectations (in terms of their experiences) and to share these expectations and experiences in order to attain a better understanding of how their experiences impact their decisionmaking.

To aid with the discussion, the panelists at each table will be provided with the median Round 1 bookmark placements for their table group.

Once panelists have reviewed and discussed their bookmark placements, they will be given the opportunity to change or revise their Round 1 ratings.

## Activities:

1. Make sure the panelists have their ordered item booklets, item map forms, and PLDs. Return the rating form to each panelist.
2. A psychometrician will explain how the table group median cuts were calculated and talk about how the panelists will use that information as they complete the Round 2 discussions. Based on their Round 1 rating form, panelists will know where they fall relative to their table's median. This information is provided so panelists can get a sense if they are more stringent or more lenient than the other panelists in their table group.
3. Provide an overview of Round 2. Round 2 begins with a brief review of the PLDs and borderline descriptions. Panelists will be encouraged to seek clarifications from the facilitator. Remind panelists of the following:
a. As in Round 1, the primary purpose is to place bookmarks where you feel the performance levels are best distinguished, considering the additional information and discussion.
b. Each panelist needs to base his/her judgments on his/her experience with the content area, understanding of students, the definitions of the borderline students generated previously, discussions with other panelists and the knowledge, skills, and abilities required to answer each item.
4. The panelists will discuss their Round 1 ratings as a table group, beginning with the $2 / 3$ cut point and followed by the $1 / 2$ and $3 / 4$ cuts. The discussion will be facilitated by the Table Leader.
a. The discussion should focus on differences in where individual panelists in the table group placed their bookmarks.
b. Panelists should be encouraged to listen to their colleagues as well as express their own points of view.
c. Once the table level discussions have taken place, the facilitator will ask each Table Leader to share the overall discussion that took place with the larger group. In addition, any comments from stakeholder roles that are represented at the larger group level, but not at the table level (such as vision or hearing specialists) should be highlighted.
d. If the panelists hear a logic/rationale/argument that they did not consider and that they feel is compelling, then they may adjust their ratings to incorporate that information.
e. On the basis of the discussions, panelists should make a second round of ratings.
f. When placing their Round 2 bookmarks, panelists should not feel compelled to change their ratings.
g. The table groups do not have to achieve consensus. If panelists honestly disagree, that is fine. We are trying to get the best judgment of each panelist. Panelists should not feel compelled or coerced into making a rating they disagree with.

Encourage the panelists to use the discussion and feedback to assess how stringent or lenient a judge they are. If a panelist is consistently higher or lower than the group, they may have a different understanding of the borderline student than the rest of the group, or a different understanding of the Performance Level Descriptors, or both. It is okay for panelists to disagree, but that disagreement should be based on a common understanding of the borderline Performance Level Descriptors.
5. As the tables are conducting their discussions, circulate around the room to ensure that the discussions are staying on topic, the panelists understand the task, and that all panelists are participating appropriately in the discussion. Assist Table Leaders as needed.
6. When all panelists at each table group have completed their second ratings, collect the rating forms. When you collect the rating forms carefully inspect them to ensure they are filled out properly.
a. The content area, grade, and ID number must be filled in.
b. The item numbers identifying each cut score must be adjacent.
c. Check each panelist's rating form before you allow them to leave for a short break.
d. When all the rating forms have been collected, the group will take a break. Immediately bring the rating forms to the data analysis work room for tabulation.

## Round 3

Overview of Round 3: The primary purpose of Round 3 is to ask the panelists to discuss their Round 2 placements as a whole group and to give them one last opportunity to revise their ratings on the basis of that discussion. As in Round 2, they will discuss their ratings in the context of the ratings made by other members of the group.

To aid with the discussion, a psychometrician will present the following information to the panelists:

1. The table and group median Round 2 bookmark placements, and
2. impact data, showing the approximate percentage of students NCSC-wide that would be classified into each performance level category based on the room median bookmark placements from Round 2.

Once panelists have reviewed and discussed their bookmark placements and the impact data, they will be given the opportunity to change or revise their Round 2 ratings.

## Activities:

1. Make sure the panelists have their ordered item booklets, item map forms, and Performance Level Descriptors. Return the rating form to each panelist.
2. A psychometrician will present and explain the following information to the panelists:
a. The median bookmark placements for the tables and whole group based on the Round 2 ratings. Based on their Round 2 rating form, panelists will know where they fall relative to the table and room median. This information is provided so panelists can get a sense if they are more stringent or more lenient than other panelists.
b. Impact data, showing the approximate percentage of students NCSC-wide that would be classified into each performance level category based on the room median bookmark placements. Panelists will use this information as a "reasonableness check." In other words, they will discuss whether the percentages in each level seem reasonable, based on their knowledge of the test and the current status of students across the state relative to the Performance Level Descriptors. If the answer is no, panelists may choose to make adjustments to one or more of their bookmark placements.
3. Provide an overview of Round 3. Remind panelists of the following:
a. As in Round 2, the primary purpose is to place bookmarks where you feel the performance levels are best distinguished, considering the additional information and further discussion.
b. Each panelist needs to base his/her judgments on his/her experience with the content area, understanding of students, the definitions of the borderline students generated previously, discussions with other panelists and the knowledge, skills, and abilities required to answer each item.
4. The panelists will discuss their Round 2 ratings as a whole group, beginning with the beginning with the $2 / 3$ cut point and followed by the $1 / 2$ and $3 / 4$ cuts.
a. The discussion should focus on differences in where individual panelists placed their bookmarks.
b. Panelists should be encouraged to listen to their colleagues as well as express their own points of view.
c. If the panelists hear a logic/rationale/argument that they did not consider and that they feel is compelling, then they may adjust their ratings to incorporate that information.
d. On the basis of the discussions, panelists should make a final round of ratings.
e. When placing their Round 3 bookmarks, panelists should not feel compelled to change their ratings.
f. The group does not have to achieve consensus. If panelists honestly disagree, that is fine. We are trying to get the best judgment of each panelist. Panelists should not feel compelled or coerced into making a rating they disagree with.
5. When the group has completed their final ratings, collect the rating forms. When you collect the rating forms carefully inspect them to ensure they are filled out properly.
a. The content area, grade, and ID number must be filled in.
b. The item numbers identifying each cut score must be adjacent.
c. Immediately provide the completed rating forms to the data analysis team.

## Complete Procedural Evaluation Form for the Grade

Make sure panelists fill out the procedural evaluation for the grade. Emphasize that their honest feedback is important. Return the completed evaluations to the data analysis work room at the next convenient opportunity.

Collect the materials from the grade and mark them off on the Materials Tracking sheet.

## Complete Second Grade Standard Setting Activities

Begin the standard setting process for the second grade assigned to the panel. Follow the same steps with the exception of the Practice Round and Training Evaluation steps.

## Complete Final Evaluation Form

Make sure panelists fill out the final evaluation. Emphasize that their honest feedback is important. Return the completed evaluations to the data analysis work room at the next convenient opportunity.

## Organization of Materials

Collect and mark of materials on the tracking sheet. Please sort materials in the following fashion:

1. Place 9 OIBs/passage books/reference books for each grade level together- these will be used for the Articulation Activity.
2. Place 4 OIBs/ passage books/reference books for each grade level together- these will be used for the edCount Mapping Activity.
3. Collect the Item Map Forms, make sure that the panelist ID is on each form. Place the forms from Articulation panelists with the Articulation OIBs. Place the rest of the forms with the Mapping Activity OIBs.
4. Collect the PLD Front Matter and PLDs, place them with the Mapping materials.
5. Collect the rest of the panelist materials and place them in a box for shredding.

# GENERAL INSTRUCTIONS FOR NCSC STANDARD SETTING GROUP FACILITATORS 

Mathematics<br>Grades 3-8, and 11<br>August 10-13, 2015

## Preliminaries

## Introductions:

1. Make sure that panelists are sitting at the correct tables. Tables have been assigned to ensure the distribution of panelists' backgrounds and expertise at each table.
2. Welcome group, introduce yourself (name, affiliation, a little selected background information).
3. Identify the Table Leader at each table- Table Leaders will facilitate the discussion for Round 2.
4. Have each participant introduce him/herself.
5. Ask each participant to sign a nondisclosure form. Do not proceed until a signed nondisclosure form has been collected from each participant.

## Review Panelist Folder Materials

Overview: To help set the context for the meeting and the materials that will be used provide a brief review of what is in each panelist's folder.
Left Side
Agenda
Non-Disclosure Form
Room Map
Reimbursement Form
Practice Round Evaluation
Process Evaluation
Right Side
Opening PowerPoint
Performance Level Descriptor Front Matter
Performance Level Descriptors
Item Map Form
Practice Round Rating Sheet

## Take the Test

Overview: In order to establish an understanding of the test items and for panelists to gain an understanding of the experience of the students who take the test, each participant will take the test for their grade level and content area. Panelists may wish to discuss or take issue with the items in the test. Tell them we will gladly take their feedback to NCSC. However, this is the actual assessment that students took and it is the set of items on which we must set standards.

## Activities:

1. Introduce the assessment :
a. Explain that there were 4 forms of the test, that Session 1 was the same for all students and that Session 2 differed based on the form of the test.
b. Also explain that Form 1 of the test was considered the most accessible for students with low vision and/or hearing impairments.
2. Tell panelists that they are about to take the actual NCSC assessment.
a. For the first grade level the test will be projected and you, the facilitator, will read each item aloud to the panelists from the Directions for Test Administration (DTA). This most closely mirrors the student experience.

At the start of the standard setting process for the second grade level you will project Session 1 of the test and read each item aloud from the DTA as you did for the first grade level. You will then pass out Session 2 of the test (DTA) and have panelists finish the test on their own. Once they are finished you will provide panelists with the Answer Key for Session 2.
b. The purpose of the exercise is to help them establish a good understanding of the test items and to gain an understanding of the experience of the students who take the assessment.
c. The Answer Key for each item will be provided after each item is presented.
3. Tell panelists to try to take on the perspective of a student as they complete the test.

## Review and Discuss Performance Level Descriptors (PLDs)

Overview: The primary purpose of this activity is for panelists to familiarize themselves with the Performance Level Descriptors for the grade and content area. This will provide a level of context prior to reviewing the Ordered Item Booklets and filling out the Item Map Form.

## Activities:

1. Have panelists take out the PLD Front Matter and the PLDs from their folders.
2. Have panelists review the documents individually, taking notes and marking up the documents with any details and/or questions they may have.
3. After individually reviewing the descriptors, have panelists discuss each one as a whole group, starting with [Performance Level 2], and provide clarification. The goal here is for the panelists to have a collegial discussion in which to bring up/clarify any issues or questions, and to come to a common understanding of what it means to be in each performance level. It is not unusual for panelists to disagree with the Descriptors they will see; almost certainly there will be some panelists who will want to change them. However, the task at hand is for panelists to have a common understanding of what knowledge, skills, and abilities (KSAs) are described by each PLD.
4. Once panelists have a solid understanding of the PLDs, they will be ready to move to the next activity.

## Fill Out Item Map Form

Overview: The primary purpose of this activity is for panelists to think about what knowledge, skills and abilities (KSAs) are measured by each item as well as what makes one question harder or easier than another. The notes panelists take here will be useful in helping them place their bookmarks and in discussions during the rounds of ratings.

## Activities:

1. Pass out the Ordered Item Books and keys, and have panelists take out the Item Map Form
a. Have panelists record their book number on the sign out sheet and sign it
b. Have panelists write their standard setting ID (on their nametags) in the upper right corner of the form.
2. Review the Ordered Item Book and Item Map Form with the panelists. Explain what each is, and point out the correspondence of the ordered items between the two. Explain that the items are ordered from easiest to hardest, based on student performance from the most recent administration of the assessment.
3. Tell panelists they will work individually at first. After they have completed the Item Map Form, they will then discuss it as a whole group.
4. Starting with the first item, they will record for each item:
a. The knowledge, skills and abilities (KSAs) the item measures, and
b. their thoughts about what makes that question harder than the previous question.
5. Panelists should not agonize over these decisions. It may be that the second item is only slightly harder than the first. Panelists should keep in mind that the purpose of the task is to record notes that will be useful to them in completing their ratings and not necessarily to fill in every space on the form.
6. Once panelists have completed the Item Map Form, they should discuss them as a whole group.
7. Based on the whole group discussion, the panelists should modify their own Item Map Form (make additional notes, cross things out, etc...)

## Discuss Performance Level Descriptors (PLDs) and Describe Characteristics of the "Borderline" Student

Overview: In order to establish an understanding of the expected performance of borderline students on the test, panelists must have a clear understanding of:

1) The definition of the four performance levels, and
2) Characteristics of students who are "just able enough" to be classified into each level. These students will be referred to as borderline students, since they are right on the border between levels.

The purpose of this activity is for the panelists to obtain an understanding of the PLDs with an emphasis on characteristics that describe students at the borderline -- both what these students can and cannot do.

This activity is critical since the ratings panelists will be making will be based on these understandings.

## Preparation:

1. Use 3 sheets of chart paper and label the top of each one: Borderline Level 2, Borderline Level 3 and Borderline Level 4.

## Activities:

1) Introduce the task. In this activity they will:
a. individually review the Performance Level Descriptors again as needed;
b. generate whole group descriptions of borderline [Performance Level 2], [Performance Level 3] and [Performance Level 4] students.

The facilitator should compile the descriptions as bulleted lists on chart paper; the chart paper will then be posted so the panelists can refer to the lists as they go through the bookmark process.
2) Check to see if panelists want to discuss the performance levels again. Once they have a solid understanding of the PLDs, have them focus their discussion on the knowledge, skills, and abilities of students who are in the [Performance Level 2] category, but just barely. The focus should be on those characteristics and KSAs that best describe the lowest level of performance necessary to warrant [Performance Level 2] classification.
3) After discussing [Performance Level 2], have the panelists discuss characteristics of the borderline [Performance Level 3] student and then characteristics of the borderline [Performance Level 4] student. Panelists should be made aware of the importance of the [Performance Level 3] cut. This is the cut from non- proficient to just barely proficient.
4) Using chart paper, generate a bulleted list of characteristics for each of the levels. Post these on the wall of the room. Make sure that panelists agree on the bulleted characteristics and have a common understanding.

## Practice Round (First Grade only)

Overview of Practice Round: The primary purpose of the Practice Round is for panelists to become familiar with the task of placing the bookmarks. The facilitator will walk the panelists through the [Performance Level 3] bookmark placement on the practice set, engage the panelists in a readiness discussion and check for understanding. If any of the panelists indicate an incomplete understanding of the practice rating task, then the facilitator will continue to work with the panelists to clarify any misconceptions before proceeding to Round 1.

## Activities:

1. Make sure panelists have the following materials:
a. Practice ordered item set
b. Performance Level Descriptors
c. Item Map Form
2. Orient panelists to the practice ordered item set. Point out the following:
a. items are organized by difficulty from easiest to hardest;
b. the items represent the full range of difficulty included on the test.
3. Give the panelists time to read through the items.
4. The facilitator leads the group through a discussion of the [Performance Level 3] bookmark placement in the practice OIB.
a. Referring to the five ordered items in the practice set, the PLDs and the bulleted lists of characteristics posted on chart paper, the facilitator will lead a discussion about the placement of the [Performance Level 3] bookmark.
b. Panelists should consider the question:

Would $50 \%$ of the students performing at the borderline of [Performance Level 3] answer the item correctly?

Share with the panelists that the items at the beginning of the IOB will most likely only have 2 answer options, so that it is important when reviewing these items to consider whether better than $50 \%$ the students performing at the borderline will answer the item correctly.
c. Where the answer changes from yes to no is where the bookmark should be placed. Note that panelists may find that they have a yes, no, yes,... they should place the bookmark at the preponderance of no. They will need to make a judgment.

## Readiness Discussion

After the panelists have placed bookmarks in the practice ordered item set, lead a readiness discussion by posing the following five questions.

The purpose of this discussion is to determine how well each panelist understands the bookmark task, to correct any misunderstandings, and if necessary, to identify panelists whose ratings should be excluded from the standard setting if their understanding doesn't improve.

The "correct" answers for each of the questions are listed directly under each question. Some common misunderstandings are also listed for questions one and two. Please watch for these typical misunderstandings and if they arise, redirect the panelists to the correct responses. Make sure any questions or concerns are resolved prior to moving on.

1. What questions should you ask for each item?

- Would $50 \%$ of the borderline students get this item correct?
- Would $50 \%$ of the students who just barely fall in the performance level of interest get this item correct?
Please watch for and correct the following responses.
- Omission of $50 \%$ ( $<50 \%$, all students)
- Omission of borderline (all students, all students in the performance level of interest)

2. What is meant by the $50 \%$ rule?

- $50 \%$ of the borderline students would get items like this correct

Please watch for and correct the following responses.

- All students falling in the performance level of interest have a $50 \%$ chance of getting this item correct.

3. What population of students should you consider for each item?

- Borderline students
- Students who just barely fall in the performance level of interest
a. Does this population change as I progress through the items for the first bookmark? (NO)
b. Does this population change as I progress to the next bookmark? (YES)

4. As you approach a bookmark how do answers change?

- The answer to "Would $50 \%$ of the borderline students get this item correct" should change from a "yes" to a "no"
- The confidence the panelist has in the yes/no answer will decrease as he/she approaches the bookmark placement

5. How should your confidence in the answers affect your bookmark placement?

- As you become less confident in a "yes" answer, the bookmark placement should be approaching.
- Where you are least confident in your answers is typically where the bookmark will be placed.

## Training Evaluation (First Grade Only)

After the panelists have placed the bookmark in the practice ordered item set and you've answered any questions, have panelists fill out the training evaluation form. Before you start the Round 1 activities, scan the completed evaluations to see if there are any problems, concerns, or questions that need to be addressed before proceeding. Make sure any questions or concerns are resolved prior to moving on. Return the completed evaluations to the data analysis work room at the next convenient opportunity.

## Round 1

Overview of Round 1: The primary purpose of Round 1 is to ask the panelists to make their initial judgments as to where the bookmark should be placed for each cut. The first cut that will be set will be the Borderline Performance Level 3 cut. For this round, panelists will work individually, without consulting with their colleagues. Beginning with the first ordered item in the OIB, panelists will evaluate each item in turn. The panelists will gauge the level of difficulty of each of the items for those students who barely meet the definition of [Performance Level 3]. The task that panelists are asked to do is to estimate whether a student performing at the borderline of [Performance Level 3], would answer each question correctly. More specifically, panelists should answer:

- Would $50 \%$ of the students performing at the borderline of [Performance Level 3] answer the question correctly?
The same process is then repeated for the [Performance Level 1/Performance Level 2] and [Performance Level 3/Performance Level 4] cuts.

## Activities:

1. Panelists should have their Ordered Item Books, Item Map Forms, and PLDs. Pass out one Rating Sheet to each panelist.
2. Have panelists write their ID number, content area, and grade on the Rating Sheet. The ID number is on the back of their name tags.
3. Provide an overview of Round 1, covering each of the following:
a. Orient panelists to the Ordered Item Book. Remind them that the items are presented in order of difficulty, from easiest to hardest.
b. The primary purpose of this activity is for the panelists to make their initial determination as to whether $50 \%$ of students whose performance is barely [Performance Level 3] would correctly answer each item, and to place their bookmark where they believe the answer of 'yes' turns to 'no'. Remind panelists that they should be thinking about $50 \%$ of the borderline students. Once they have completed the process for the [Performance Level 2/Performance Level 3] cut, they will proceed to the remaining two cut points starting
with [Performance Level 1/Performance Level 2] and then the [Performance Level 3/Performance Level 4] cut.
c. Each panelist needs to base his/her judgments on his/her experience with the content, understanding of students, and the definitions of the borderline students generated previously.
d. One bookmark will be placed for each cut point.
e. If panelists are struggling with placing a particular bookmark they should use their best judgment and move on. They will have an opportunity to discuss their ratings and make revisions in Rounds 2 and 3.
4. Tell panelists that they will be discussing each cut point with the other panelists but that they will be placing the bookmarks individually. It is not necessary for the panelists to come to consensus about where the bookmarks should be placed.
5. Go over the rating form with panelists.
a. Lead panelists through a step-by-step demonstration of how to fill in the rating form.
b. Answer questions the panelists may have about the work in Round 1.
c. Once everyone understands what they are to do in Round 1, tell them to begin.
6. Starting with the first ordered item in the OIB and the [Performance Level 2/Performance Level 3] cut, the panelists will work through the OIB item by item and make their initial bookmark placements.
7. As panelists complete the task, ask them to carefully inspect their rating forms to ensure they are filled out properly.
a. The content area, grade, and ID number must be filled in.
b. The item numbers identifying each cut score must be adjacent.
c. Check each panelist's rating form before you allow them to leave for a short break.
d. When all the rating forms have been collected, the group will take a break. Immediately bring the rating forms to the data analysis work room for tabulation.

## Tabulation of Round 1 Results

Tabulation of Round 1 results will be completed by the data analysis team as quickly as possible after receipt of the rating forms.

## Round 2

Overview of Round 2: In Round 2, the panelists will discuss their Round 1 placements in table groups (facilitated by the Table Leader) and then revise their ratings on the basis of that discussion. They will discuss their ratings in the context of the ratings made by other members of their table group. The panelists with the highest and lowest ratings should comment on why they gave the ratings they did. The group should get a sense of how much variation there is in the ratings. Panelists should also
consider the question, "How tough or easy a rater are you?" The purpose here is to allow panelists to examine their individual expectations (in terms of their experiences) and to share these expectations and experiences in order to attain a better understanding of how their experiences impact their decisionmaking.

To aid with the discussion, the panelists at each table will be provided with the median Round 1 bookmark placements for their table group.

Once panelists have reviewed and discussed their bookmark placements, they will be given the opportunity to change or revise their Round 1 ratings.

## Activities:

1. Make sure the panelists have their ordered item booklets, item map forms, and PLDs. Return the rating form to each panelist.
2. A psychometrician will explain how the table group median cuts were calculated and talk about how the panelists will use that information as they complete the Round 2 discussions. Based on their Round 1 rating form, panelists will know where they fall relative to their table's median. This information is provided so panelists can get a sense if they are more stringent or more lenient than the other panelists in their table group.
3. Provide an overview of Round 2. Round 2 begins with a brief review of the PLDs and borderline descriptions. Panelists will be encouraged to seek clarifications from the facilitator. Remind panelists of the following:
a. As in Round 1, the primary purpose is to place bookmarks where you feel the performance levels are best distinguished, considering the additional information and discussion.
b. Each panelist needs to base his/her judgments on his/her experience with the content area, understanding of students, the definitions of the borderline students generated previously, discussions with other panelists and the knowledge, skills, and abilities required to answer each item.
4. The panelists will discuss their Round 1 ratings as a table group, beginning with the $2 / 3$ cut point and followed by the $1 / 2$ and $3 / 4$ cuts. The discussion will be facilitated by the Table Leader.
a. The discussion should focus on differences in where individual panelists in the table group placed their bookmarks.
b. Panelists should be encouraged to listen to their colleagues as well as express their own points of view.
c. Once the table level discussions have taken place, the facilitator will ask each Table Leader to share the overall discussion that took place with the larger group. In addition, any comments from stakeholder roles that are represented at the larger group level, but not at the table level (such as vision or hearing specialists) should be highlighted.
d. If the panelists hear a logic/rationale/argument that they did not consider and that they feel is compelling, then they may adjust their ratings to incorporate that information.
e. On the basis of the discussions, panelists should make a second round of ratings.
f. When placing their Round 2 bookmarks, panelists should not feel compelled to change their ratings.
g. The table groups do not have to achieve consensus. If panelists honestly disagree, that is fine. We are trying to get the best judgment of each panelist. Panelists should not feel compelled or coerced into making a rating they disagree with.

Encourage the panelists to use the discussion and feedback to assess how stringent or lenient a judge they are. If a panelist is consistently higher or lower than the group, they may have a different understanding of the borderline student than the rest of the group, or a different understanding of the Performance Level Descriptors, or both. It is okay for panelists to disagree, but that disagreement should be based on a common understanding of the borderline Performance Level Descriptors.
5. As the tables are conducting their discussions, circulate around the room to ensure that the discussions are staying on topic, the panelists understand the task, and that all panelists are participating appropriately in the discussion. Assist Table Leaders as needed.
6. When all panelists at each table group have completed their second ratings, collect the rating forms. When you collect the rating forms carefully inspect them to ensure they are filled out properly.
a. The content area, grade, and ID number must be filled in.

## b. The item numbers identifying each cut score must be adjacent.

c. Check each panelist's rating form before you allow them to leave for a short break.
d. When all the rating forms have been collected, the group will take a break. Immediately bring the rating forms to the data analysis work room for tabulation.

## Round 3

Overview of Round 3: The primary purpose of Round 3 is to ask the panelists to discuss their Round 2 placements as a whole group and to give them one last opportunity to revise their ratings on the basis of that discussion. As in Round 2, they will discuss their ratings in the context of the ratings made by other members of the group.

To aid with the discussion, a psychometrician will present the following information to the panelists:

1. The table and group median Round 2 bookmark placements, and
2. impact data, showing the approximate percentage of students NCSC-wide that would be classified into each performance level category based on the room median bookmark placements from Round 2.

Once panelists have reviewed and discussed their bookmark placements and the impact data, they will be given the opportunity to change or revise their Round 2 ratings.

## Activities:

1. Make sure the panelists have their ordered item booklets, item map forms, and Performance Level Descriptors. Return the rating form to each panelist.
2. A psychometrician will present and explain the following information to the panelists:
a. The median bookmark placements for the tables and whole group based on the Round 2 ratings. Based on their Round 2 rating form, panelists will know where they fall relative to the table and room median. This information is provided so panelists can get a sense if they are more stringent or more lenient than other panelists.
b. Impact data, showing the approximate percentage of students NCSC-wide that would be classified into each performance level category based on the room median bookmark placements. Panelists will use this information as a "reasonableness check." In other words, they will discuss whether the percentages in each level seem reasonable, based on their knowledge of the test and the current status of students across the state relative to the Performance Level Descriptors. If the answer is no, panelists may choose to make adjustments to one or more of their bookmark placements.
3. Provide an overview of Round 3. Remind panelists of the following:
a. As in Round 2, the primary purpose is to place bookmarks where you feel the performance levels are best distinguished, considering the additional information and further discussion.
b. Each panelist needs to base his/her judgments on his/her experience with the content area, understanding of students, the definitions of the borderline students generated previously, discussions with other panelists and the knowledge, skills, and abilities required to answer each item.
4. The panelists will discuss their Round 2 ratings as a whole group, beginning with the $2 / 3$ cut point and followed by the $1 / 2$ and $3 / 4$ cuts.
a. The discussion should focus on differences in where individual panelists placed their bookmarks.
b. Panelists should be encouraged to listen to their colleagues as well as express their own points of view.
c. If the panelists hear a logic/rationale/argument that they did not consider and that they feel is compelling, then they may adjust their ratings to incorporate that information.
d. On the basis of the discussions, panelists should make a final round of ratings.
e. When placing their Round 3 bookmarks, panelists should not feel compelled to change their ratings.
f. The group does not have to achieve consensus. If panelists honestly disagree, that is fine. We are trying to get the best judgment of each panelist. Panelists should not feel compelled or coerced into making a rating they disagree with.
5. When the group has completed their final ratings, collect the rating forms. When you collect the rating forms carefully inspect them to ensure they are filled out properly.
a. The content area, grade, and ID number must be filled in.
b. The item numbers identifying each cut score must be adjacent.
c. Immediately provide the completed rating forms to the data analysis team.

## Complete Procedural Evaluation Form for the Grade

Make sure panelists fill out the procedural evaluation for the grade. Emphasize that their honest feedback is important. Return the completed evaluations to the data analysis work room at the next convenient opportunity.

Collect the materials from the grade and mark them off on the Materials Tracking sheet.

## Complete Second Grade Standard Setting Activities

Begin the standard setting process for the second grade assigned to the panel. Follow the same steps with the exception of the Practice Round and Training Evaluation steps.

## Complete Final Evaluation Form

Make sure panelists fill out the final evaluation. Emphasize that their honest feedback is important.
Return the completed evaluations to the data analysis work room at the next convenient opportunity.

## Organization of Materials

Collect and mark of materials on the tracking sheet. Please sort materials in the following fashion:

1. Place 9 OIBs/reference books for each grade level together- these will be used for the Articulation Activity.
2. Place 4 OIBs/ reference books for each grade level together- these will be used for the edCount Mapping Activity.
3. Collect the Item Map Forms, make sure that the panelist ID is on each form. Place the forms from Articulation panelists with the Articulation OIBs. Place the rest of the forms with the Mapping Activity OIBs.
4. Collect the PLD Front Matter and PLDs, place them with the Mapping materials.
5. Collect the rest of the panelist materials and place them in a box for shredding.

## Please indicate any questions you may have about the remainder of the standard setting meeting.

- Consensus building for this group is tedious; my suggestion is to implement a mechanism to ensure 1 person speaks at a time.

## Please indicate any areas in which you would like more information before you continue.

- Group discussions have been very helpful.
- I think I have to keep asking myself the question, Can at least $2 / 3$ of the borderline group get this correct. It is not yet automatic for me.

W hat materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- The borderline performance level details and the performance descriptors as primarily, they were non-negotiable, once developed/established. They provided a somew hat standardized visual.
- Test booklet stems - comparing item to borderline performance and level descriptors moved me to put cuts in certain places.
- B orderline info and details of expectations.
- The PLDs/borderline PLDs and the skills necessary to answer the questions along with my experience in SPED.
- The borderline student description because I placed the cut where I thought the $2 / 3$ rule would apply.
- PLDs - it was my basis for deciding what students could do what questions.
- Coming up with the borderline performance level details as a group.
- The practice items, golden rod sheet, discussions, and PLD descriptors.
- B orderline descriptors.
- The borderline performance level details and $2 / 3$ majority because it hel ped me determine what questions seemed appropriate for each level.
- The test questions themselves were the most influential. I analyzed the questions and considered level/borderline to make my cuts. A Iso, I feel that no level should be too small (too few questions) otherwise the student cannot show a range of skills that determine the level at proficiency.

What materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- Charts created by us with the guidelines that were provided to us. Talking to members of my table and members of the other table.
- PLDs and borderline performance level details and discussion.
- The impact data made me rethink my placements as I did not want roughly $40 \%$ of students to score at a level 1.
- The performance level descriptors because it made it more concrete.
- The consensus of the borderline characteristics.
- Performance level descriptors and borderline performance level.
- K nowing the PLD and borderline characteristics. Looking at text to see where text complexity fell from each of the passages.
- Difficulty of materials. Discussions.

What materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- B orderline level descriptors. It gave me a visual of what was expected in each level.
- The K SA s for borderline students, 2/3 rule, discussions with other groups - hel ped me to think outside of my own experience.
- Discussion with other participants
- The borderline descriptors we created as a group were very helpful.
- Using our KSAs -- classified into border groups -- helped focus my judgements.
- The borderline data as well as the discussions. Difficulty with individual questions was hel ped with group discussions and overall data.
- M y experience w/ items and students, comparing their performance to PLD characteristics.
- Data, test material, and borderline performance level details.
- The borderline performance levels combined with feedback \& discussion from peers and my knowledge of the language.

W hat materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- W orking with grade 11 performance level descriptors. Our borderline guidelines. What we came up as a group.
- PL D - text complexity chart. Going through the 2nd cut and talking with the table group about why they made that cut and what influenced them.
- Group discussions and doing the cutoff activity/chart.
- The PLD's were very helpful and very useful for working towards helping our students meet higher levels and develop growth in instruction.
- Table discussions - helped me see other perspectives and make best decision based on K SA tested. PLD's - help define levels and re-focus table/group discussions.
- PLDs
- Performance level descriptors - link to academic knowledge, skills, and abilities was essential to ground our conversations.
- The discussions with table and whole groups - being able to hear other points-of-view.

What materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- Our borderline descriptions \& open conversations and debate
- Using borderline performance level details and performance level descriptors allowed me to approach this task with a neutral viewpoint. M y experience played a role when I was unsure of my answer.
- I felt like a good agreeance across the group on descriptors led to easier more in depth conversations
- Discussion helped, looking @ the front matter for performance level descriptors and the Grade 3 M ath Performance level Descriptors; then charting out B orderline $2 / 3$ characteristics hel ped greatly.
- The performance \& borderline descriptors \& my knowledge of mathematical conceptual understanding b/c they all create a clear picture of what students should know \& be able to do.

What materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- Our borderline descriptions and open conversations and debate.
- Using borderline performance level details and performance level descriptors allowed me to approach this task with a neutral view point. M y experience played a role when I was unsure of my answer.
- I felt like a good agreeance across the group or descriptors led to easier more in depth conversations.
- Discussion helped, looking at the front matter for performance level descriptors and the Grade 3 math performance level descriptors; then charting out borderline $2 / 3$ characteristics hel ped greatly.
- The performance and borderline descriptors and my knowledge of mathematical conceptual understanding because they all create a clear picture of what students should know and be able to do.

What materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- I felt that table and group discussions and the PLDs were the most influential because we could bounce ideas off each other.
- Our discussions during "item mapping", discussions during cuts but also having borderline / PLD to refer to.
- group discussions
- The performance level descriptors, how mu students responded to the test
- The PLDs as well as the consensus of the cut score borderlines.
- The performance level descriptors were very helpful
- The collaboration of the groups was the most hel pful.
- PLDs and borderlines
- The performance level descriptors and definitions of the borderline students were the most impacting. They defined the target group we were considering for the level changes.

W hat materials, information, or procedures were most influential in your placement of the cut scores?
Why?

- The challenge of 11 th grade math is high and I relied on the perf. Level descriptors in most cases.
- Discussions with colleagues - allowed me to check my thinking. PLD's - objectively gave me direction
- The performance level descriptors.
- Looking at would $50 \%$ of the students performing at the borderline of performance level. Thinking of the mathematics terminology + complexity of each level -> used as a guide.
- I feel confident with the cut off criterial decided upon. The percentages in the impact data were somewhat concerning + (i.e. $25 \%$ of this population to achieve level $4 \mathrm{w} / \mathrm{no}$ support / instruction is too high of percentage based on my knowledge/experience.

## Please provide any additional comments about the standard setting process or suggestions as to how the training and process could be improved.

- Possibly providing a copy of Bloom's Taxonomy for reference. Training facilitator more familiar with process, more assertive as it will help kepp process on track.
- The facilitator should have more time to become familiar with the materials prior to the training.
- Some instruction up front about committees deligate would have smoothed and facilitated more productive discussion. Our group spent far too much time interpreting each other and not listening to pertainent comments.
- Facilitator had difficulty maintaining group cohesiveness and a collaborative atmosphere. She seemed unfamiliar with the materials and in general lacked confidence. This was a frustrating experience throughout.
- To no fault of their own, facilitators were unclear of material and directions. It made it difficult for them to give clear tasks explanations without having seen the test. N eeded more direction on creating borderline criteria - and clearer definitions of test levels (examples maybe).
- There seemed to be a lot of confusion about the materials; which ones and when needed. This caused delays.
- Need more clear direction and time about how to create borderline PLDs.
- M ore time for the facilitator to aclimate with the materials. M ore efficientness in de-esclating problematic conversations.

Please provide any additional comments about the standard setting process or suggestions as to how the training and process could be improved.

- A few items from the test did not have corresponding handouts initially until facilitator was able to secure. Security for entering/leaving room a bit too rigid.
- While this was very informative, overall some of us expressed concern about the true value of our input. There were definite concerns about test items that had not changed or had minimal changes from the 1st to 3rd testing (e.g., passage lengths) to the inconsistencies of item
presentations (e.g., photo pictures in text vs. pencil drawings provided in answers). Some bias of text was also noted.
- It was well planned and it was easy to see the steps needed to complete the process.
- Grade 5 ELA was difficult/challenging to set cut scores as the text complexity levels were not as clear as in Grade 6. For example, we really struggled to find a level 2 text so our \% of student in the level 2 cut score is very small.

Please provide any additional comments about the standard setting process or suggestions as to how the training and process could be improved.

- $M$ aking sure that some of this information is shared with teachers giving test.
- I truly enjoyed this experience. I would hace liked to see the Round 3 data. I hope this information gathered and determined in this standard setting is considered and used to make judgements about the scoring of the operational assessments. I would be interested in seeing the $M$ ath grade 11 impact data. M aybe a final blessing?? piece we are only assessing 1 grade level, we could see both set of data.
- G reat process for setting standard. I felt very comfortable setting my cut scores and making cut scores. Doing the borderline differences was very helpful in understanding how the test changed levels.
- For those not familiar, may be helpful for separate session for these people where test is used. N ot necessary for all. Table discussions were most beneficial!
- V ery well - organized process - for, stimulating and a great way to get me geared up to start the school year! Incredible accommodations!! :) I loved going through the test as a group to become more familiar with it. It has been a few month. :)
- B ecause there were items on the first practice test we reviewed that were not on the test form for which we ultimately developed cut scores, I'm not fine that it was useful to do that whole practice test without additional context. Additionally, it was very hard to read so many pages of text on the projection screen; a hard copy would have significantly helped.

## Please provide any additional comments about the standard setting process or suggestions as to how the training and process could be improved.

- The cut score/standard setting processes were very organized. The progression of activities led to deeper understanding. The facilitator allowed and encouraged progessional arguments to really clarify the corderline levels and discussions about the complexity level of the test questions indicidually.
- We need matirials in Spanish because most of my students they primary language is Spanish.
- It was interesting to be a part of it. I loved collaborating with others in my field.
- I think the PLD's were clear, however the progression of PLD's betw een levels was not consistent. I think this was the potential to really impact how students score on the NCSC.
- M y main concern with these students who finished the assessment and are a part of these scores, many of the students in a level 1 are students whose abilities do not make the level 1 performance descriptions. For example, my student who completed grade 5, completed the test, and is probably considered a level 1 student, but I know her skills do not even reads the KSAs for level 1 . She completed the assessment because she understands that when I ask her to make a choice between 2 or 3 responses, that she must make a choice no matter what. Y ou can ask her any question and provide her with choice responses, and she will respond even if the information is not relevant to her. I just worry about kiddos like this, but overall this was a great experience that I am so happy to be a part of! :)
- I think the full process chould have been described in more detail at the very beginning of our group meetings. People still had questions about the purpose or outcome of our meetings until into the afternoon of the first day.

## Please provide any additional comments about the standard setting process or suggestions as to how the training and process could be improved.

- Some of the test items were confusing. M aybe another look over some of them would make them more effective.
- Our group worked so well together; B etsy did a wonderful job as our facilitator. I learned a great deal from this process and am so thankful to have taken part in the process.
- This was a great new experience to be a part of and gave me a great appreciation of standard setting. I believe that allowing more group discussions and feedback could improve, but overall the training ran very smoothly.
- Small group getting was beneficial. I had q great group to work with.

## ELA Comments:

- The spread for proficient/not proficient in grade $3,5,8 \mathrm{I}$ feel is skeed meaning the cuts were too high
- I did my judgement based on that a lower percent made the cut too high
- Grade 5 has a significant amount of $1 s$ and $3 s$ it seems to me it should be more dispersed
- Grade 3 seems to have way too many students falling in level 1 . Grades $7,8 \& 11$ seem to have a more even di stribution betw een levels and between proficient vs. non-proficient. Grade 5 has very little room for level 2
$M$ ath Comments:
- Proficiency is $50 \%$ for general education testing
- Level 4 - High task complexity with no support or instruction is challenging to achieve. PLD cut off points to determine are more important than impact data

ELA Comments:

- I feel the panel has made best judgements with adjustments at each level
- Considering some grades at fewer with more items, I think the cuts are where they should. Text complexity seemed to be one of the biggest factors to consider when reviewing the items

M ath Comments:

- None
